Description	syslog() is subject to format string vulnerabilities.		
APIs	Function Name	Comments	
	syslog		
	vsyslog		
Method of Attack	<p>Use of syslog() can introduce vulnerability to a format-string attack.</p> <p>syslog() is used to log system message. syslog() accepts a printf-style format string as a parameter for it's messages. Because of this, an attacker could potentially send a message that could cause syslog to fail.</p>		
Exception Criteria			
Solutions	Solution Applicability	Solution Description	Solution Efficacy
	When syslog is used.	Verify that input is of a limited size. If the message is coming from an outside source, check for %s type parameters and ensure that bounds will not be overwritten. Don't use text from an outside	Effective.
